

About the Occultation

- S31 Rev 47 Saturn Atmospheric occultation
 - Egress Atmospheric occ only
 - Telemetry OFF, 1-way mode
 - Covered by Goldstone
- Starting with rev 47 and until the end of the Cassini nominal mission, radio occultations of Saturn's rings and atmosphere occur mostly on separate orbits. The rev 47 occultation is the first in that sequence. It provides an egress only atmospheric/ionospheric occultation that **probes a mid-southern Saturn latitude**. Radio occultations over a range of Saturn latitudes provide important information about the structure and physical properties of the atmosphere, including its thermal structure, microwave absorbing species, the hydrogen-to-helium ratio, Saturn's winds, and the electron number density profile of Saturn's ionosphere.

ORTs

All BWG ORTs are to prepare for Rev47 Occ and T33 gravity

ORT on DOY 170-171 (June 20-21) over DSS-25, DSS-14 and DSS-34, X, S and Ka

07 170 2345 0130 0400 0415 DSS-34 CAS TP RSR46-OCCORT2 3545 N750 1A1

- Collect warm-up data at all three frequencies over DSS-25 and DSS-14
- DSS-14 verify S- and X-band (RCP and LCP)
- DSS-25 and DSS-34 verify monopulse ops and collect pointing data
- Power failure at SPC-10 caused DSS-25 to fail from 22:14 to ~22:44 (DR# G107832) and DSS-14 to fail from 22:14 to ~23:07 (DR# G107833)
- Nominal DSS-34 support

ORT on DOY 171 (June 20) over DSS-26, X and Ka-band

07 171 1725 1825 0345 0400 DSS-14 CAS TKG PASS 3545 N003 1A1

- DSS-14 is prime for uplink and telemetry
- DSS-26 collected pointing data (monopulse) to update the 4th-order blind pointing model
- Nominal supports
