No David Rochblatt  
traveling back from Madrid

~1600 got message from David Rochblatt. He's traveling back from Madrid. He spoke to Leigh Cameron at Camberra, & he's having problems developing new model.

1605 Ace briefing to DSS-34 followed by DSS-43  
DSS-34 Pre 1600, BOT 1730, EOT 2115, Post 2130  
Pass # 3767

Weather Clear, Eq. Green

Pass # 3767

Ops

DSS-43 Elias on rsops1: X RSR1A, S RSR1B

DSS-34 Danny on rsops2: X VSR1A, K VSR1B

backup X RSR2A, K RSR2B

RSR2 status is green, but just in case!

DSS-43 LCP Don on rsops3: XLCP WUSR1A, SLCP WUSR1B

Nope (Lu) giving stations predicted signal level

DSS-34 X

DSS-34 K -136 dBm

DSS-43 X -129 dBm

DSS-43 S -140 dBm

1650 Talked w/ 34 about pointing model. They asked about entering offset. Told the J spoke w/ David Rochblatt & he spoke w/ engineer at Camberra & we have two options: Put manual offsets in system, or let man. calculate offsets. Asked them if they have preference. He said that engineer there prefers.

entering manual offset. Asked what it is. Said +4 mdeg in elevation. Asked if we should start w/ monopulse then enter offsets, or enter offset from start. Said to start w/ monopulse, but engineer thinks offset will be larger than mn. can calculate. Told them we cannot keep monopulse enabled. We have about 20 minutes at beg. to enable, but should have offset before 1810.

Fggin :

1857 asked 34 if they have room for offsets, whether to enter manual or go w/ monopulse  
⇒ go w/ monopulse, which is now 7.2 in elevation  
⇒ so at 1905 disable man. & keep offsets, correct?  
⇒ correct.

1902 Asked 34: We've been monitoring man. offsets on our side & noticed that Az corrections increased during past couple of minutes, wondering if they did anything on their side that would explain it  
⇒ they haven't done anything

19030 34 disabled monopulse (keep offsets)  
(plan was 1905)

offsets in system: Az Corr 2.90, EL Corr 6.15
